## Experience

### Software Engineer

June 2025 – Present

eBay

Toronto, Canada

- Designed and implemented a tokenized validation **Spring Boot Java GraphQL** microservice for eBay's real-time bidding engine, reducing validation latency by **50%** and increasing **GMV** by over **2%** on live stream auctions.
- Authored lifecycle architecture and **gRPC** APIs for a geographically-distributed event-sourced **NoSQL** auctions platform, enabling **sub-100ms** real-time bidding on live stream auctions.
- Migrated legacy public APIs from **SOAP** serving **1,000+ TPS** to federated **GraphQL** using **Netflix DGS, Spring Boot, and Oracle SQL**, collaborating with cross-functional stakeholders to reduce integration complexity for external API consumers.
- Designed and built a test-caching framework that reduced **Jenkins CI/CD** execution time by over **one hour**, significantly accelerating developer feedback cycles.

### Software Engineer Intern

May 2024 – Aug 2024

eBay

Toronto, Canada

- Led the feature development of an error recovery queue for cache updates, ensuring data recovery and long-term consistency in a production cache serving **3+ billion daily read requests** for item and seller data (**40,000 TPS**).
- Developed **Spring Boot** and **Spring Batch** services in **Java** and **Kotlin**, utilizing **Kafka** event queues and **NoSQL** database operations to enable the recovery of a **15,000 TPS** event processing system.
- Implemented **Prometheus** and **Grafana** monitoring, adding observability and alerting for critical production systems.
- Authored and presented an **architectural design document** in an architectural design review session, receiving approval for new modules and enhancements to existing high-traffic production systems.

### Software Developer Co-op

May 2023 – Aug 2023

Royal Bank of Canada

Toronto, Canada

- Created contract-first cloud-native **REST API microservices** for payment transaction systems in an **Agile** team using **Java, Spring Boot, Microsoft Azure, Kafka, Elasticsearch, MS SQL Server, and Git**.
- Added **OAuth2** token parsing and verification to a new API layer, ensuring security for **10,000+** daily B2B transactions.
- Implemented feature flags to repoint downstream API calls against maintenance schedules, increasing uptime by **30%**.

### Software Engineer Co-op

Sep 2022 – Dec 2022

PointClickCare

Mississauga, Canada

- Developed and unit-tested authentication, authorization, and DB back-end systems for **4** data processing cloud ETL pipeline **REST APIs** using **Java, Spring Boot, OAuth2, Kafka, and MS SQL Server** in an **Agile** environment.
- Integrated microservices with **Jenkins CI/CD** and multiple **Azure** services using **Helm Charts** and **Terraform** scripts.

## Education

### University of Toronto

Sep 2021 – Jun 2025

Honours BSc Computer Science Co-op | **4.0/4.0 GPA**

Toronto, Canada

- Lester B. Pearson Scholarship - Full-ride (2021-2025).
- UofT Scholar In-Course Award - Top 20 students over the preceding year (2022, 2024).
- Teaching Assistant for Intro to Software Engineering (2025).
- Research Assistant at the Computational Social Science Lab (2023-2025).

## Projects

### Maia Chess AI Platform 🧠

- Led back-end systems design and development for a Chess AI platform for providing machine learning analyses using **Python, FastAPI, MongoDB, Redis, Azure, Nginx, Git, and Docker**.
- Developed critical **RESTful** back-end accounts, data collection, caching, game ingestion, and user statistics systems.
- Optimized **asynchronous** parallel job queues for processing **AI** analyses to improve API endpoint response times by **1000%+**, and refactored existing code to increase server uptime by over **2x**.

## Technical Skills

**Languages & Databases:** Java, Python, Kotlin, Oracle SQL, NoSQL, MongoDB, Elasticsearch

**Frameworks & APIs:** Spring Boot, GraphQL, Netflix DGS, gRPC, REST, Azure, Agile

**Infrastructure & Tools:** Docker, Kubernetes, Kafka, Jenkins, Jira, Git, Prometheus, Grafana, Nginx, Maven
